

SUMMARY

Java Full Stack Developer with strong fundamentals in Core Java and hands-on experience in building scalable backend services using Spring Boot, REST APIs, Spring Security, and MySQL. Skilled in implementing JWT-based authentication, Role-Based Access Control (RBAC), and clean layered architecture. Currently enhancing skills in system design, API development, and problem-solving for SDE-1 roles.

EDUCATION

B.Tech in Computer Science

SATI Engineering College Oct 2022 – May 2026
CGPA: 7.4

Higher Secondary Education

Govt. Excellence School June 2020 – May 2022
Percentage: 68%

Secondary Education

Govt. Excellence School June 2018 – May 2020
Percentage: 90%

EXPERIENCE

Internship - Program Tactics SATI Vidisha

Role – Programming Intern July/2023

- Selected for the intensive department-led "Programming Tactics" program focused on advanced data structures and core logic design.
- Strengthened practical understanding of algorithmic problem-solving by implementing real-time modular coding patterns.
- Collaborated on clean code compliance standards, significantly optimizing debugging speeds and logic structure.

SKILLS

Languages: JAVA, JavaScript, SQL
Technologies/Frameworks: React, Bootstrap, Spring Boot, REST APIs, Spring MVC, Hibernate, Spring Data JPA, Spring Security, Spring AI
Developer Tools: VS Code, IntelliJ, Eclipse, Git, Github, Maven, Postman
Relevant Coursework: DSA, OS, DBMS, CN, SDLC, OOPs, System Design, Multithreading

CERTIFICATIONS

- Mastering Data Structure and Algorithms – Sheryians
- Java Programming – Sheryians
- Software Engineering Job Simulation - JP Morgan Chase Co

PROJECTS

Banking System

Jan 2025

Technologies: React, Java, Spring Boot, MySQL, JWT

GitHub: View Project

- **Engineered** a secure full-stack banking application utilizing **React.js** and **Spring Boot** to handle real-time transaction workflows and account monitoring.
- **Designed** and exposed robust **RESTful APIs** integrated with **Spring Data JPA** for efficient data persistence and relational CRUD mapping.
- **Implemented** secure **JWT-based authentication** and **Role-Based Access Control (RBAC)** via **Spring Security** to guarantee endpoint protection.
- **Optimized** database interaction using **query tuning** and custom **pagination**, effectively mitigating latency under data-heavy transactional simulation.

E-Commerce FullStack Platform

Jan 2026

Technologies: React, Spring Boot, REST APIs, MySQL

GitHub: View Project

- **Architected** a production-ready e-commerce platform featuring dynamic product catalogs, asynchronous cart workflows, and secure order processing.
- **Integrated** modular components by connecting a responsive **React** interface with scalable **Spring Boot micro-services** using clean HTTP communication.
- **Enforced** fine-grained user access governance by configuring custom **Spring Security filters** alongside secure stateless token management via **JWT**.
- **Structured** optimized relational schema workflows in **MySQL**, executing defensive coding practices like validation and global exception handlers for zero data corruption.
